

Stereotactic Body Radiation Therapy (SBRT) Using the BodyFix System

SBRT is a type of high dose radiation used to treat small tumours. This handout offers information you need to understand this treatment. It is important to read this handout to prepare for your appointments.

After each radiation treatment, it is safe for you to be around other people (including children) and pets. You are not radioactive.

Your healthcare team needs to find the exact position of your tumour(s) before and during each treatment. It is important you do not move during treatment. This allows the treatment to be given correctly.

CT Simulation

CT simulation is the first step in preparing you for SBRT treatment. At this appointment you will have a 'planning' CT scan. CT simulation allows your radiation oncologist to see your tumour(s) and decide the best way to treat it.

For CT simulation, you will:

- Be positioned on your back using an immobilization device called the BodyFix system (see picture #1 below). This device helps you stay in the right position for your treatment. A cushion is placed under your body. A plastic sheet is loosely placed on top of your body. The cushion and plastic sheet will tighten to your body as a vacuum removes air from them. This will not hurt.
- **You need to wear the same shoes for your CT simulation and every treatment appointment.** Winter boots, flip-flops or sandals do not work well. If you wear any of these, bring a pair of shoes to wear during your appointment.

Picture #1: This is a picture of the BodyFix system.

The BodyFix system will be used for each of your radiation treatments. The length of your treatment appointments will be much longer than your CT simulation appointment. Tell the radiation therapists if you are not comfortable at any time. We need to find a position comfortable for you.

You will be given permanent tattoos (small markings) at this appointment. These tattoos will be used to position you for your radiation treatments.

Treatment planning

The next step is treatment planning where your team will find the best way to direct the radiation to your tumour(s). You are not present for treatment planning.

Radiation treatment

Each treatment will be about 1 hour.

If you normally have muscle or bone pain, it may help to take pain medication (acetaminophen or ibuprofen) before your radiation treatment appointments. This will help you to be comfortable during your treatments.

Radiation treatments do not hurt. It is important you do not move after you are in the right position on the treatment bed. This will make sure the treatment is given correctly. You can breathe normally.

X-ray images will be taken to check the position of your tumour(s). Changes to your position will be made if needed. To make these changes, the treatment bed you are lying on may move a little.

Picture #2. This is a picture of a radiation machine used to give SBRT treatment.

Preparing for your radiation treatments

- Wear the same shoes you wore for your CT simulation appointment for every treatment appointment.
- Take your regular medications (unless your radiation oncologist tells you not to).
- It is okay to eat a light meal and drink before your treatment.

Side effects of your radiation treatments

You will be given the handout “Having Radiation Therapy to Manage Your Symptoms” at your CT Simulation appointment. This handout offers you information on the possible side effects of radiation therapy. You can find more information in the Canadian Cancer Society booklet “Radiation Therapy: A Guide for People with Cancer”.

If you have a problem or concern about a symptom or side effect from your cancer treatment:

1. Call your primary nurse at the cancer centre from Monday to Friday, 8:30 am to 4 pm, (except on holidays). Use the phone number your primary nurse gave you.
2. Contact CareChart Digital Health from Monday to Friday, 5 pm to 8:30 am and anytime on weekends and holidays for symptom management support.

Talk to a nurse using one of these options:

- Call the after-hours telephone line at 1-877-681-3057.
- Request a video call by going to www.carechart.ca.
- Use the CareChart Digital Health App. This App is available to download for iOS or Android devices.

Call 911 or go to the emergency department at the hospital closest to you for a medical emergency. Talk to any member of your healthcare team if you have questions or do not understand any of the information in this handout.
